

0.1 Definitions

The landview of terms and definitions used in climate change risk assessment is varied and this may cause confusion. For the sake of clarity, here some definitions are listed, along with the sources they are taken from. If no specification of the source is present, the definition is assumed to be taken from [?].

determinant Any component of risk, i.e. hazard, exposure, vulnerability, response, from [?, 493].

driver Individual components of determinants, from [?, 493].

exposed sample asset that is threatened, e.g. airport runways, from [?, 553].

indicator "quantitative, qualitative or binary variable that can be measured or described, in response to a defined criterion", from [?] and used also in [?, ?, ?].
